

Please allow XM and Sirius satellite radio to continue to have local weather and traffic. Just from a standpoint of convenience, there is also safety and other issues such as fuel savings when knowing the traffic situation. I can not get instant traffic reports under FM or AM radio, but must wait until it is on their schedule to give me the traffic and weather. Because satellite radio is always on and always gets reception, the listener in their car will always know the traffic....it would be just plain unfair and take away a freedom I choose to pay for...it's a free country with the right to choose and I choose satellite radio.
Thank you,
Brandon Braly
